DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3, 4 and 6-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barry (USPN 4093235) in view of Moore (USPN 3642286).

Barry discloses a tourist game for educating players with respect to tourist attractions within particular geographical regions (See Abstract). Barry discloses, word for word, all of the limitation claimed by the applicant except for having a parallelepiped or pyramid shaped multi-tokens means being the same or different colors with directional indicia on their ends. Moore discloses a game having changeable faces in which bear indicia on all sides (See Figures 2 and 3). The indicia possess different characteristics such as different power or capability, direction of movement, etc. (See Abstract and Entire Document). Moore also discloses that the playing pieces may be of different color to differentiate each player's pieces and are stackable (See Column 2, lines 24 through 30; and Column 4, lines 56 through 69). It would appear that stacking the pieces would prevent the pieces from crowding on a particular area of the board. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have indicia on a number of faces or ends of the game pieces, as taught

by Moore, in order to show the different characteristics of the pieces such as capability and movement. The applicant does not disclose why it is critical for the multi-tokens to be an elongated parallelepiped or pyramid shaped, and therefore, it would be an obvious matter of design choice being that the game pieces of Moore, which are shown as being cubical, to make them of any similar shape such as parallelepiped (cubical) or pyramid shaped. It is inherent within Moore that one would grab the sides of the game piece in order to move the game piece. Though Barry or Moore does not disclose having gripping wings, the applicant does not disclose the criticality of the gripping wings, therefore, would have been an obvious matter of design choice. One having ordinary skill in the art would have expected the sides of Moore to functionally perform the same, which is to provide sides for moving the game piece.

Response to Arguments

Applicant's arguments with respect to claims 1, 3, 4, and 6-25 have been considered but are moot in view of the new ground(s) of rejection.
